

**Assignment 6.**

This homework is due *Thursday*, October 15.

There are total 25 points in this assignment. 22 points is considered 100%. If you go over 22 points, you will get over 100% (up to 115%) for this homework and it will count towards your course grade.

Collaboration is welcome. If you do collaborate, make sure to write/type your own paper and *credit your collaborators*. Your solutions should contain full proofs. Bare answers will not earn you much.

This assignment covers sections 3.3–3.4 in Bartle–Sherbert.

- (1) [3pt] (3.3.2) Let  $x_1 > 1$  and  $x_{n+1} = 2 - 1/x_n$  for  $n \in \mathbb{N}$ . Show that  $(x_n)$  is bounded and monotone, hence convergent. Find the limit.

- (2) [2pt] Find a mistake in the following argument:

“Let  $(x_n)$  be a sequence given by  $x_1 = 1$ ,  $x_{n+1} = 1 - x_n$ . In other words,  $(x_n) = (1, 0, 1, 0, 1, 0, \dots)$ . Show that  $\lim(x_n) = 0.5$ . Indeed, let  $\lim(x_n) = x$ . Apply limit to both sides of equality  $x_{n+1} = 1 - x_n$ :

$$\lim(x_{n+1}) = \lim(1 - x_n)$$

$$\lim(x_{n+1}) = 1 - \lim(x_n)$$

$$x = 1 - x,$$

so  $x = 0.5$ ”

- (3) [3pt] (3.3.11) Establish convergence or divergence of the sequence  $(y_n)$ , where

$$y_n = \frac{1}{n+1} + \frac{1}{n+2} + \dots + \frac{1}{2n} \quad \text{for } n \in \mathbb{N}.$$

- (4) (a) [2pt] (Exercise 3.3.12) Let  $x_n = \frac{1}{1^2} + \frac{1}{2^2} + \frac{1}{3^2} + \dots + \frac{1}{n^2}$ ,  $n \in \mathbb{N}$ . Prove that that  $(x_n)$  converges. (*Hint*: for  $k \geq 2$ ,  $\frac{1}{k^2} \leq \frac{1}{k(k-1)} = \frac{1}{k-1} - \frac{1}{k}$ .)
- (b) [2pt] Let  $K$  be a natural number  $K \geq 2$ . Let  $y_n = \frac{1}{1^K} + \frac{1}{2^K} + \frac{1}{3^K} + \dots + \frac{1}{n^K}$ ,  $n \in \mathbb{N}$ . Prove that that  $(y_n)$  converges. (*Hint*: compare<sup>1</sup>  $y_n$  to  $x_n$ .)

- (5) (13.3.13abd) Establish the convergence and find the limits of the following sequences.

(a) [1pt]  $((1 + 1/n)^{n+1})$ ,

(b) [1pt]  $((1 + 1/n)^{-2n})$ ,

(c) [1pt]  $((1 - 1/n)^n)$ .

(*Hint*: Express these sequences through  $X = ((1 + 1/n)^n)$ . Use arithmetic properties of limit..)

— see next page —

<sup>1</sup>*Compare* here does not mean “write a short essay about how  $y_n$  is the same as  $x_n$  but with  $K$ ”, but rather determine which is greater.

(6) [2pt] (3.4.1) Give an example of an unbounded sequence that has a convergent subsequence.

(7) [3pt] (3.4.14) Let  $(x_n)$  be a bounded sequence and let

$$s = \sup\{x_n : n \in \mathbb{N}\}.$$

Show that if  $s \notin \{x_n : n \in \mathbb{N}\}$ , then there is a subsequence of  $(x_n)$  that converges to  $s$ .

(8) (a) [3pt] (3.4.9) Suppose that every subsequence of  $X = (x_n)$  has a subsequence that converges to 0. Show that  $\lim X = 0$ .

(b) [2pt] Suppose that every subsequence of  $X = (x_n)$  has a converging subsequence. Is it true that in this case,  $X$  must converge?
