

Math 331. Introductory Statistics

Instructor: Ionut Florescu

Office: Kidde 227

Email: ifloresc@stevens.edu

Phone: (201) 216-5452 *Office hours:* TTh 11:00pm -12:00pm and by appt.

website: <http://www.math.stevens.edu/~ifloresc/Teaching/2006-2007/index331.html>

The purpose of MA331 is to acquaint you with the essential ideas and reasoning of applied statistics (data analysis, data production, inference) and with statistical methods for various types of data.

Required material

- (a) The textbook: *"Introduction to the practice of Statistics"*, by D. Moore and G. McCabe, 4th edition, WH Freeman and Co, 2002, ISBN: 07167-9657-0.
- (b) Software textbook: *"Introductory Statistics with R"*, by Peter Dalgaard, Springer Verlag, 2004, ISBN: 03879-5475-9.
- (c) A scientific calculator (graphing calculator is ok but not necessary).
- (d) An activated Stevens computer account.
- (e) A stapler.

Computing

We will use R statistical software in this class. R resembles MATLAB in its approach, however it is designed specifically for statistical analysis. Data

sets, and other information will be available at the course Web site. See the *getting-r.pdf* file on the website for a basic introduction and getting started with R. The second textbook provides great help with R functions. If you encounter problems with R code, you may email questions to me. Please attach your programs with the e-mail.

Note about use of EXCEL: An important goal of this class is to prepare the students to use statistical methods appropriately in a later course in their major field. Because we would not recommend the use of Excel for this purpose, we do not use it in MA331. Excel is very useful for a variety of basic purposes including the preparation of data sets for statistical analyses. However, there are some serious deficiencies in this software. For more details about the deficiencies in Excel, see <http://www.stat.uiowa.edu/~jcryer/JSMTalk2001.pdf>

Attendance

You are expected to attend each class and to participate in the discussion. In general, students who attend class regularly perform much better than those who come only occasionally. This professor reserves the option of giving pop quizzes, so you are taking a risk of losing additional points in addition to missing important information.

Grades

	Assignments	30%
	Quizzes and Attendance	10 %
The final grade will be determined as follows:	Projects 1 and 2	30%
	Final Examination	30%
	<hr/>	
	Total	100%

You should assume that the letter-grade cutoffs for this course are the typical 90-100 for an A, 80-89 for a B, etc.

Assignments

Homework will be collected according to the posted schedule. The assignments will be posted on the course website. Each assignment is worth 20 points. The assignment will be graded in part for completeness and in part a

few (not all) of the problems will be graded for correctness. Late homework will not be accepted. Turning in homework early to my mailbox in the mathematical sciences department office (Kidde Bldg.) no later than 1 hour before class starts on the day the assignment is due is fine. You are encouraged to discuss the homework assignments with other students, but you must write up your work independently. You are expected to turn in complete solutions. This means **SHOW YOUR WORK**. One-line answers with no work attached may receive no credit depending on the problem. Please see the file on the website entitled "Collaboration and Group Work." Homework is rarely excused. If you must miss class due to a job interview or university-sponsored activity, you must turn in your assignment in advance to receive credit. One HW score will be dropped at the end of the semester. If you have an excused HW, this is the one which will be dropped.

Projects

As part of the requirements for completion of this class students will have to demonstrate the ability of using and applying material learned in class to real problems. Note that there is no Midterm examination listed for the class.

The first part of the Project has a deadline around the middle of the semester and the second part will be due around the end of the semester (the exact dates to be announced later). A more formal description of the Project will be posted on the course website at a later date.

Final Exam

The exam will be closed book/closed notes written examination. You will be allowed to bring pencils, a calculator, and ONE one-page cheatsheet (8 1/2" x 11", handwritten, both sides). The date and time for the final exam will be announced later. See the course website for review problems and other exam information. You are expected to bring your student ID to the exam.

Make-up quizzes and examination

Valid reasons for missing an examination include university documented absence, illness, and/or a death in your family. Work is not a valid excuse. If you must miss an examination, you must print off a "Make-up Exam Form" from the course website, complete the form, and turn it in to me. Appropriate documentation (university or doctor's note, obituary, etc.) must be stapled to the make-up exam form. Failure to turn in the make-up exam form and documentation within 24 hours following the administration of an exam will result in a score of zero points for the examination. No examination will be given earlier than the scheduled time. Only one make-up examination time will be scheduled following each regular examination.
